

BETTER VACUUM CUPS INC.

Why We Are Better:

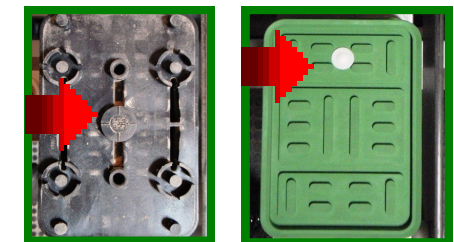

Route into your rubber tops? No problem. BVC rubber tops with incorporated groove can accept foam gasket to make a new seal.

Route into the plastic? No problem. BVC modular plastic design can be made into a half or quarter cup.

BVC cups have 30% better holding power and are a fraction of the cost over OEM, this is the cup for your machine.

BVC rubber tops are also sectional, 2" parts are no problem on our 6" cup. Just use gasket material. BVC rubber tops are also thicker giving you over 10mm before you route into the plastic.

No more clogged port or dust in your vacuum system. BVC has a simple ball valve to keep the dust out.
